Our Cabinet Custom Construction:

Quality and strength are our most important focus so we have taken extra steps to build the best cabinetry in the industry. Our flat panel doors offer 3/8" thick center panel which greatly reduces warping and twisting and eliminates rattling. The cabinet boxes are fully assembled with wood dowels and built with a 5/8" thick solid top, back, bottom, and sides to ensure the cabinets are rigid and remain square and feature full depth shelves. A wide range of other materials and thicknesses are available as well to suit your project needs. Our professional craftsman, high-end computer-controlled equipment and commitment to using only the best hand-selected, long-lasting materials guarantee accuracy, consistent quality and beautiful cabinetry
